RE: Interruption in Supply of MMC9609L Baxter Evo IQ/Colleague Blood Pump Set

Dear Sir/Madam,

Baxter Healthcare Ltd. would like to notify you that we are currently experiencing a disruption in the supply of some IV sets. This is due to a delay in our distribution process from our Tunisia manufacturing plant. This includes the MMC9609L blood pump set used in our Evo IQ and Colleague LVP infusion pumps.

We are aware of the potential impact this supply interruption may have on customers and we are continuing to explore solutions to protect and maintain product supply to the best of our ability, however, we are facing a shortage of this set used by your hospital.

Unfortunately at this time Baxter cannot offer alternatives to this code.

Baxter is doing everything possible to ensure supplies for all medically necessary products for patients. We are due to receive further stock mid January 2023.

In order to protect supply please only use MMC9609L blood pump sets in the Baxter Evo IQ and Colleague infusion pumps when it is absolutely necessary to pump blood. Please use a gravity blood set where possible and when only gravity infusion is required.

Baxter will update this communication if there are any changes to the above.

In the meantime, should you have any questions regarding this issue, please contact your local Baxter Infusion Systems company representative, or Baxter Customer Services on UK: 0800 0289 881; NI: 0800 0280 826; ROI: 01 2065570.

Yours faithfully

Lee Thompson
Product Manager – Medication Delivery and Acute Therapies Consumables
