Dear Customer,

Details of affected devices

Teleflex Medical Europe Limited has initiated a voluntary Field Safety Corrective Action (“FSCA”) for the above listed products; refer to Appendix 2 for Unique Device Identifier (“UDI”) and lot number information.

Description of the problem & immediate actions required

This voluntary FSCA for the above-listed products has been initiated due to reports of pilot balloon non-inflation or cuff non-deflation.

In the event of pilot balloon non-inflation, there is a potential risk of injury to the patient as the pilot balloon no longer reflects the condition of the cuff, which may lead to over-inflation of the cuff. The risk persists in situ, therefore clinicians should evaluate the risk benefit to individual patients of extubation and reintubation.

In the event of cuff non-deflation, there is the potential risk of injury if the device is removed from the patient with the cuff still inflated. If extubation and removal of the endotracheal tube is planned

and the cuff cannot be deflated via the Bepak valve, then the inflation line should be cut in order to facilitate passive deflation of the cuff.

No deaths or long-term patient injuries have been reported at this time.

Our records indicate you have received products that are subject to this FSCA.

Depending on your device location please adhere to the following Action list:

Device location	Action List Number
