

## Modification of the winding of the pressure monitoring lines and reservoir systems

Dear Customer,

with this letter we want to inform you that we have made changes to our pressure monitoring lines and reservoir systems and are using the modified items in our production.

The following changes have been made to the parts:

- Firstly, the shape of the winding has changed from oval to round.
- Furthermore, the fixing with the paper tape on the filling line has also been changed. Instead of fixing with one paper strip, it is now fixed with two small paper strips.

These modifications have **no influence** on the use, the function or safety of the products. Please inform your customers accordingly.

This change will be found step by step in the sterile sets according to the inventory. The gradual introduction of the changes also applies to bulk items.

The following article groups are affected by the amendments (Different lengths are not listed separately):

- Reservoirsystems (NBSS, NBSS XL, ABSS, ABSS XL)
- Pressure monitoring lines ( Standard and Minibore in PVC and PUR)
