

GenFLEX Endotracheal Tube - Uncuffed

The GenFLEX Endotracheal Tube helps secure the patients airway in order to supply oxygen, medicine, or anaesthesia. Supports breathing in pneumonia, emphysema, heart failure, collapsed lung, or severe trauma.

All GenFLEX Endotracheal Tubes are designed for both oral and nasal intubation. Available in a range of formats with comprehensive sizes, ranging from adult to paediatric: Cuffed, Uncuffed and Reinforced.

- **Smooth Soft Rounded Bevelled Tip:** Designed to reduce the possibility of tracheal trauma during intubation
- **Soft Fine Murphy Eye:** Provides an alternative pathway for gases to flow in case of occlusion
- **Depth & Graduation Markers:** Assist with correct placement and handling during intubation after confirmation by auscultation
- **Radio-opaque Line:** Easy X-ray visualisation and identification, also aids in positioning of the tube, whilst enabling breath misting to be visible
- **Size Indicator:** For easy identification
- **Calibration:** Accurate indication of insertion depth acts as an aid for monitoring and handling the position of the tube
- **15mm Connector:** Conforms with ISO13485, for connection to standard anaesthetic and ventilation equipment to secure airways
- **Medical Grade PVC Tube:** Follows a natural curve in accordance with patient's anatomy, highly transparent with a smooth surface for easier insertion
