Subject: 3M™ Ranger™ Blood/Fluid Warming Disposable Sets Product Hold

To whom it may concern,

This letter is to inform you of the temporary cease in distribution of the 3M™ Ranger™ Blood/Fluid Warming Disposable Sets, Models 24200, 24240, 24250, 24355, 24450 and 24370.

The distribution of these models has been restricted for the EU, EFTA, and UK markets due to an ongoing evaluation by the Notified Body for conformance to state of the art norms and standards regarding particulate limits. Solventum is actively engaged with the Notified Body to lift the hold as quickly as possible and minimize disruption for customers.

A health hazard evaluation conducted by Solventum has confirmed that there is no identified patient safety risk associated with use of the product. Therefore, the product within your inventory can continue to be safely utilized.

Solventum is working diligently with our Notified Body to resolve this as quickly as possible with the hope of the restriction being lifted before the end of September 2025. Inventory of the Ranger Blood/Fluid Warming Disposable Sets remains available in local Solventum distribution centers so that shipments can resume immediately after resolution is reached.

Sincerely,

Brendan Casey

Sr. Director, Regulatory Affairs, Solventum US LLC
