

# Information for Clinical Choice

## Pulse Lavage

### Support Document

#### Introduction

Information for Clinical Choice (ICC) has been developed to assist Clinicians in the decision-making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain. The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product review, conducted by Clinical Engagement and Implementation Managers, with support from clinical stakeholders from across the NHS.

The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

#### Total Orthopaedic Solutions 3: Pulse lavage

Pulse lavage is a surgical device powered tool, that provides simultaneous high- or low-pressure irrigation and suction to effectively clean / remove unwanted tissue or substances from wounds, or from bone during orthopaedic procedures.
