

October 2026

Subject: Temporary supply disruption affecting CATSmart autotransfusion products

Dear valued customer,

We are writing to inform you of a temporary supply disruption affecting the following products due to upstream production issues confirmed by our production unit:

Material code	Product Description
9305103	AT3 - Autotransfusion Set
9305101	AT1 - AUTOTRANSFUSION SET
9305161	REINFUSION BAG WITH Y-ADAPTOR 1000ml

Our Operations and Supply Chain teams are actively managing the situation in collaboration with our Production Unit to expedite its resolution. Contingency measures, including allocation controls, are already in place.

We currently anticipate that these supply issues could continue into early 2027. We will keep you updated as we work to resolve the delay.

We kindly advise customers to prioritise stock for clinical use as opposed to learning and training opportunities within their centre.

We sincerely apologise for any inconvenience caused and recognise the potential impact that delays in the supply of these products may have on patient care and healthcare services. We appreciate your understanding while we work to resolve this issue as quickly as possible. If you have any questions, please contact your local Fresenius Kabi Business Development Manager.

Sincerely,

Harris Leah
Product Manager, Transfusion and Cell Therapies Portfolio
