Information for Clinical Choice

Anaesthetic Facemasks

Support Document

Introduction

Information for Clinical Choice (ICC) has been developed to assist Clinicians in the decision-making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain.

The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product review, conducted by DHLs Clinical Procurement and Quality Assurance Team with support from clinical stakeholders from across the NHS as part of our assurance process.

The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

Respiratory: Anaesthetic Facemasks

A non-sterile, flexible, form-shaped device designed to be placed over the nose and mouth creating an airtight seal to deliver a proportional mixture of air/oxygen (O2), Nitrous oxide/Oxygen (N_2O/O2), and/or other inhalation anaesthetics before, during, and after the anaesthetic procedure. Anaesthetic facemasks are made clear to allow patient's nose and mouth to be observed for foreign bodies (vomit, blood). They come in a variety of sizes, shapes, materials and with or without sample ports. Anaesthetic facemasks connect to anaesthetic circuits and anaesthetic machines. This device is sometimes used in association with a manual resuscitator.
