

# Information for Clinical Choice

## Blood Collection Lancets (Finger and Heel)

Support Document

10 June 2024

### Introduction

Information for Clinical Choice (ICC) has been developed to assist clinicians in the decision-making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain. The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product review, conducted by the Clinical Engagement and Implementation Team, with support from clinical stakeholders from across the NHS.

The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

### Blood Collection: Blood Lancets

Blood Lancing systems are a sterile, hand-held, sharply pointed, mechanical and non-mechanical, scalpel-like instrument intended to be used by a healthcare provider to manually puncture the skin of a patient to obtain a small blood specimen or drain a cyst or boil. This is a single-use device.
