

# Information for Clinical Choice Matrix and Support Document

## Intravenous (IV) Stoppers

Information for Clinical Choice (ICC) has been developed to assist clinicians in the decision-making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain. The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product review, conducted by DHLs Clinical Collaboration Team (CCT), with support from clinical stakeholders from across the NHS.

The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

### **Intravenous Accessories and Pressure Monitoring Accessories: Intravenous Stoppers**

A small, non-invasive, closed-ended Luer attachment intended to be attached to a luminal device (e.g., catheter, intravenous administration or pressure-monitoring tubing, syringe) with a Luer connection to close the device lumen, typically to prevent fluid path contamination and/or spillage; it is not intended to disinfect/maintain disinfection. It is typically made of synthetic polymers and may incorporate a strap; it does not incorporate a filter or valve. This is a single-use device. <sup>1</sup>

They include: -

- IV Combi-stoppers – A dual end male/female luer lock stopper
- IV Stopper – A single end luer lock which is used as a male stopper.
- IV Stopper with injection site
