

# Information for Clinical Choice

## Reusable Tourniquets

Support Document

### Introduction

Information for Clinical Choice (ICC) has been developed to assist clinicians in the decision-making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain.

The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product / data review, conducted by the Clinical Engagement and Implementation Team, with support from clinical stakeholders from across the NHS. The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

### Blood Collection Devices: Reusable Tourniquets

A device in the form of a narrow strap intended to be wrapped and manually tightened typically around a patient's arm to control/stop blood flow during collection of blood from a vein; it may additionally be used with a pressure bandage to apply pressure to a wound. It typically includes an adherent layer (e.g., Velcro) and/or a buckle mechanism for fastening/locking that allows adjustments to the degree of tightness. This is a reusable device.
