

Information for Clinical Choice

Suction Consumables - Rigid Yankauer Suction Catheter

Introduction

Information for Clinical Choice (ICC) has been developed to assist clinicians in the decision making process when assessing the suitability of a product by providing a clear illustration and description of the features of a range of similar products supplied through NHS Supply Chain.

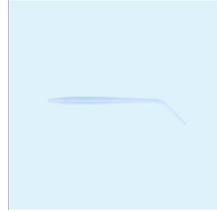

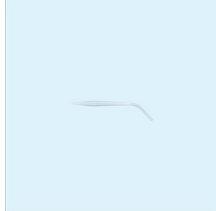

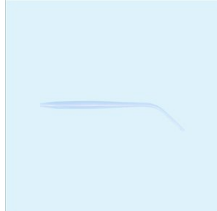

The criteria provided, in the form of a Product Matrix and Support Document, is the result of a product / data review, conducted by the Clinical Engagement and Implementation Team, with support from clinical stakeholders from across the NHS. The aim, alongside delivering savings back into NHS frontline services, is to ensure that clinical choice remains at the forefront of any product switching decision.

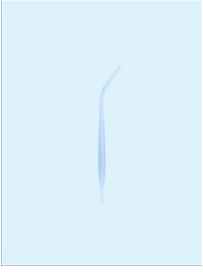

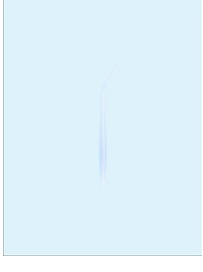

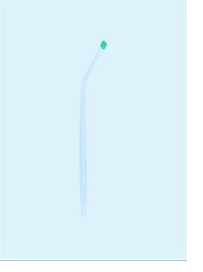

Rigid Yankauer Suction Catheter

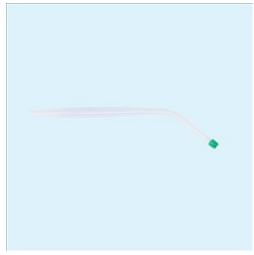

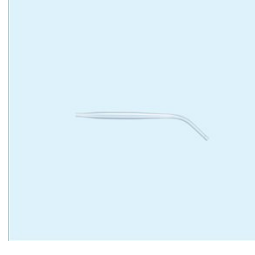

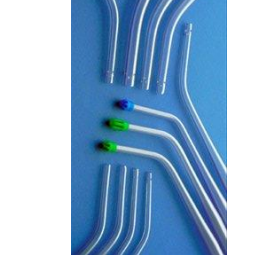

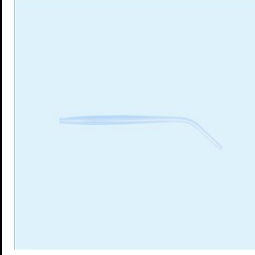

Rigid Yankauer suction catheters are hollow, atraumatic suction instruments designed to provide safe and effective removal of secretions, fluids, or debris from the airway or surgical field. Constructed from firm, moulded materials, the rigid design supports consistent suction performance and enhanced control during procedures. A smooth, rounded suction tip helps facilitate rapid and efficient aspiration while minimising the risk of tissue injury. The fixed shape ensures stable handling and predictable access to the oropharynx, making rigid Yankauer catheters particularly well-suited to environments where precision, durability, and reliable performance are essential. These devices are available in both sterile and non-sterile formats to meet differing procedural and infection-control requirements.

A clear understanding of the purpose and functional characteristics of rigid Yankauer suction catheters is essential for making informed clinical choices. This document provides supporting information to help clinicians determine when a rigid Yankauer may represent the most appropriate option, ensuring device selection aligns with patient needs, procedural demands, safety considerations, and the operational requirements of the clinical setting.
